JOINING US?

A 'green' building is a building that, in its design, construction or operation, reduces or eliminates negative impacts on our climate and natural environment.

Going green – whether you're targeting certification or not will require additional upfront cost. Green building typically uses resources more efficiently than other buildings. In the long run, lower operation and maintenance cost helps to cost-justify the capex incurred.

According to WorldGBC, green buildings tend to have higher occupancy rate, higher rental rates, higher sales prices than other buildings. A well-managed green building not only can have lower carbon footprint as well as improve productivity and wellbeing and increase the value of the building property.

PROGRAMME

0830 - 0900	//	Registration and Welcoming
