TECHNICAL FIELD VISIT

The objective of this technical field visit is to educate and provide awareness to all IEM-WRTD members on the current state of Sg. Klang in terms of water quality, biodiversity, current development, and future development, and to learn about the operation of two Interceptors (Interceptor 002 and 005) situated within Sg. Klang. The technical field visit and the river education trip will also provide an insight to all IEM members into the significant contributions led by LLSB Sdn. Bhd. under the Selangor Maritime Gateway Project towards the sustenance of Klang River and its water resources.
