SYNOPSIS

"Facts and Myths about Building Biohealing" explores the intricacies of constructing biohealing environments from the perspective of project management. Delving into both scientifically supported facts and common misconceptions, the topic examines the integration of biological elements in building design. From the proven benefits of nature-infused spaces to dispelling myths surrounding the perceived challenges, this webinar aims to provide a comprehensive understanding of the symbiotic relationship between built environments and human well-being. Project managers can leverage on the concepts of building biohealing to reduce the cost for building maintenance and repair

BIODATA SPEAKER

Dr. Nur Zulaikha Yusof is currently a senior researcher at Centre for Coastal and Marine Environment, Maritime Institute of Malaysia (MIMA). She is a former senior lecturer with academic background on chemistry and environmental engineering, conducting research related to marine conservation, aquatic invasive species, biofouling, microplastic pollution, and Port Reception Facility. She was one of the COBSEA National Focal Points, representing Malaysia for APEC OFWG - Microplastic Distribution in Coastal Aquaculture in Bali Indonesia and expert speaker in APEC - Workshop on International Policy Development of Marine Pollution Control in Tianjin, China.
