

CIE-HKIE-IEM Tripartite Seminar on The Management and Case Study on Adjacent Underground Construction

Ir. Liew Shaw Shong is currently the Chairman of IEM Geotechnical Engineering Technical Division (GETD). He is the Senior Director of G&P Geotechnics Sdn Bhd

Tripartite Seminar was originated from a bilateral institutional collaboration between The Institution of Engineers Malaysia (IEM) and Chinese Taipei APEC Engineer Monitoring Committee in Chinese Institute of Engineer (CIE). In 2009, The Hong Kong Institution of Engineers (HKIE) and the Hong Kong Geotechnical Society (HKGES) had sent a delegation to attend the CIE-IEM Joint Seminar in Yilan, Taiwan. Since then, the first CIE-IEM-HKIE Tripartite Seminar cum APEC Seminar was held in May 2011 in Hong Kong and the second seminar was hosted by IEM GETD on 23 October 2012 in Kuala Lumpur. This year, the tripartite seminar (Photos 1 to 6) was hosted by CIE in Taipei at Howard Civil Service International House on 15 November 2013 and followed with a technical visit (Photos 7 to 18) to "The Suhua Highway Mountain Section Improvement Project" on 16 November 2013.

HKIE has organised a delegation of 10 members whereas the delegates from IEM, Malaysia are listed in Table 1. Partial subsidy was given to the presenters for the airfares and travelling expenses with utilising the retained profit under GETD incentive account in organising the past tripartite seminar in Kuala Lumpur.

A total of ten papers (three papers from IEM and HKIE each and four from CIE) on the topics as listed in Table 2 were published and presented under the theme of the seminar. A copy of the proceedings was deposited in IEM library for members who are interested on the topics.

The aforementioned project for the technical visit consists of 8 tunnels totalling 23.4km, bridges of 8.5km (balanced cantilever segmented bridges and cable-stayed bridges) and cut-and-fill road works of 6.5km with a total project budget of NT\$49.2 billion (RM5.4 billion). Due to increasing pressure from environmental conservation and concern of environmental impact during construction, the project is executed with high level of environmental requirements (Photos 14 and 15), construction carbon footprint management, heritage preservation and safety requirements (Photos 16 to 18). To achieve the promise of transparency, the project team engaged with a real time monitoring system and full details of every aspect of the project with immediate update, which is accessible by general public via website (www.suhua.gov.tw). This benchmarking project would serve a good reference to Malaysian engineers, project clients and contractors for construction at sensitive areas.

CIE has extended their memorable hospitality to the delegates with free accommodation and registration fee to the delegation leader and presenters, two dinners (Photos 19 to 23) and seafood lunch (Photo 24) during the site visit. Special thanks shall be expressed to Ms. Chuo, secretariat of Chinese Taipei APEC Engineer Monitoring Committee, Chinese Institute of Engineers in arranging the accommodation, transport to IEM delegates and keeping a smooth running of the entire seminar.

The next tripartite seminar will be held at Hong Kong next year. Announcements will be made progressively advising the details of the seminar after the organising committee from HKIE is formed.

Table 1 : List of Malaysian delegation

Ir. Liew Shaw Shong (Delegation Leader – Chairman of GETD)
Ir. EG Balakrishnan (Presenter – GETD committee member)
Ir. Dr. Chan Swee Huat (Presenter)
Ir. Loh Yee Eng (Presenter)
Engr. Richard Ong Tiam Hwa (Delegate - GETD committee member)
Engr. Dr. Gue Chang Shin (Delegate - GETD committee member)
Mr. Tan Chee Yen (Delegate - Co-author)
