SYNOPSIS

Critical infrastructures are vital as its incapacity or destruction have a debilitating impact on our country's defense, economy and national security. These infrastructures require more detailed attention in their protective security management strategy and implementation. This session provides the implementation framework for Integrated Security Management System as part of the protective security management strategy in critical infrastructures. There are several studies on the positive impacts of using Integrated Security Management System for crime prevention and reduction but they are not without its flaws. The implementation framework helps designers and specifiers to address the issues and challenges of integrate security system designs in critical infrastructure by incorporating elements from other security domains, such as Policy, Physical, Personnel, Data, Document and Devices. Participants are also provided with the selection criteria that incorporate Integrated Security Management System that helps satisfy different security designs such as Ingress/Egress Control, Conduct Control, Deployment Flow Management, Registering Evidence or Audit trail and others.

PROGRAMME

09:00-9.:05am	Introduction by IEM Chairman
